

EasySeparate is the solution for today's demand for converting and combining the output of an MFP.

With EasySeparate it is possible to simplify the data input process by configuring a profile for mass input of each particular type of forms. The configurable presets include:

- Combining or separating documents based on a barcode or text string/regular expression
- Blank page removal, a number of image processing options
- Indexing, adding time and date stamp for extra traceability, collecting meta-data in XML ticket
- Setting a pre-defined output format with corresponding file type and name

EasySeparate supports ABBYY FormReader – a powerful data capture product by ABBYY Software House allowing to automatically read, convert, and export unstructured documents, such as invoices, to any external system.

EasySeparate provides a variety of customization options by means of its Scripting module.

ABBYY® FormReader®

EasyData and ATAPY Software for Seamless Data Capture

Through innovative use of ABBYY FineReader products and long-term cooperation with ATAPY Software, EasyData B.V. is becoming the leading supplier of customized OCR/ICR solutions in the Netherlands

As a subcontractor to EasyData B. V., ATAPY has applied its experience in a number of projects for the Dutch IT industry. ATAPY solutions are now part of several efficient software products which streamline the data capture routines for end users in a number of vertical markets.

ATAPY develops a valuable add-on to EasyData's Flagship Product EasySeparate

ATAPY Software contributed to the development of EasySeparate by implementing Visioneer OneTouch® Link – a solution that integrates the industry-leading Visioneer and XEROX scanners supporting the OneTouch® technology with EasyData product. The ATAPY's Visioneer-certified OneTouch® Link works with the device driver, allowing users to enjoy the benefits of quick and straightforward scanning combined with the outstanding EasySeparate's data capture capabilities. Preparing to scan multiple documents of similar type or structure, a user selects one of his pre-configured EasySeparate profiles in the scanner interface settings and specifies EasySeparate as a destination. All the rest of work, apart from pushing or clicking "Scan", is done by EasySeparate – including intelligent barcode- and text-based document flow separation, sorting, blank page removal, OCR, document indexing, metadata processing, grouping, format conversion, and export.

The solution provides a powerful add-on to EasySeparate, making specific and familiar EasySeparate processing choices immediately available to users.

"With EasySeparate we've been striving to bring a new degree of ease and transparency into the document management process of small to middle organizations, allowing them to increase operating efficiency and cut costs. This new integration takes us one step further in this direction; I'm sure it'll be demanded by our customers," says Robert Camerlink, the EasyData B.V. CEO.

Participation in Development of the Scan2IT Component for Océ

Among EasyData's customers is Océ, one of the world leaders in hardware and software for document processing. Cooperation has started with a relatively simple "Océ Document Interpreter" application which detected separator pages within the incoming image stream and split the stream into multi-page documents. Stability, short development time, and low cost of this initial application led Océ to order additional features, such as barcode search and logging, empty page detection, and many others. Another application, titled FineRead, packs the power of ABBYY OCR technologies into a silent "image gobbler", lurking as an NT service program and monitoring selected catalogues for new images. Incoming images get recognized and exported according to a sophisticated set of instructions composed by the user. Merged together, these two applications formed the basis for Scan2IT ("Scan to Intelligent Text") – a complex image processing system now offered by Océ offices around the world.

About Visioneer:

Visioneer (www.visioneer.com) is a world-class developer of intelligent imaging solutions that provide a faster and easier way to capture documents and photographs and integrate them with popular Windows and document imaging applications.

About Océ:

Océ NV (www.oce.com) is a Netherlands-based company that manufactures and sells production printing and copying hardware and related software. Océ N.V. has been a listed company since 1958 and is the holding company for the international Océ Group. This group has operating companies in 25 industrialised countries.

EasyData B.V. (www.easydata.nl) is a Netherlands-based company specializing in data capture, document management solutions, and the associated consulting services. Serving the needs of the Dutch and Belgian SMB markets, EasyData's innovative applications make the user experience more compelling by changing the way paper-intensive organization manage their document flows.

ATAPY Software (www.atapy.com) is a provider of on-demand software solutions in the fields of OCR/ICR, document imaging, and data capture. In addition to its main activity, ATAPY has been taking part in various archive digitization and knowledge preservation endeavors through offering a range of media services (scanning, data capture, key-from-image, mark-up, verification, etc.) to libraries and data archives all over the world.
