*"The software supplied is also very good. ABBYY FineReader recognizes text, tables and images in documents and can import to Word or Excel for editing. It will automatically rotate scanned pages to their correct orientation and leave out any blank pages."*

*Tim Smith,

UK*

**FUJITSU**

*Fujitsu (www.fujitsu.com) is a multinational computer hardware and IT services company based in Tokyo, Japan. The company specializes in semiconductors, air conditioners, computers (supercomputers, personal computers, servers), telecommunications, and services. Fujitsu employs around 400,000 people and has ~500 subsidiary companies.*

## ABBYY FineReader for Fujitsu ScanSnap!™

**ScanSnap**  
Color Image Scanner

**Under a contract with ABBYY Europe GmbH, ATAPY Software has completed ABBYY FineReader for ScanSnap!™ software package to be bundled with Fujitsu scanners**

ScanSnap!™ by Fujitsu is a family of high-speed desktop office scanners with the key idea of one-step approach to document conversion. Normally, one push of a button on the scanner's faceplate is enough to see the document image on the screen. And if any

scanning parameters need to be modified, ScanSnap Monitor software enables users to do that in just a few mouse clicks.

But the image is not always the answer - no scanning software suite is complete without a good OCR application. For Fujitsu, the choice was obvious: ABBYY FineReader. ABBYY European office which negotiated the deal transferred the development to ATAPY Software, ABBYY's technology partner. The application implemented by ATAPY comprised four components. Modules Scan2Word, Scan2Excel, and Scan2PDF converted scanned images to the corresponding file formats as a result of pushing the button on the scanner. The intentional simplicity of the solution didn't mean lack of flexibility, as the fourth component - the Exporter Settings module - provided access to a variety of parameters: turning on and off preservation of page and line breaks, retaining text color for Word documents, replacing uncertain words with images and reducing picture resolution for PDF, and overall practically the entire wealth of FineReader settings and options.

The package offered a wide choice of recognition and interface languages. A user could select from 7 languages of the program interface: English, German, French, Russian, Spanish, Portuguese, or Italian. Also there were tools for adding new interface languages. And, thanks to the built-in capabilities of ABBYY FineReader, the number of recognition languages was so large (177) that they had to be categorized into 5 groups for manageability.

ABBYY FineReader for ScanSnap!™ combines the simplicity of the brilliant Fujitsu one-step scanning approach and the power of ABBYY FineReader technology. ATAPY's expertise enabled these components to work in synergy for the best performance and user satisfaction.
